

Case Study: System Inventory Rationalisation

Situation

- Inaccurate system inventory, resulting incorrect operational expenditure

Tasks

- Realise potential cost saves in EMEA Unix server estate
- Reduce power consumption and data centre footprint

Actions

- Reviewed EMEA wide Unix infrastructure
- Expanded program to include all technology units
- Presented recommendations
- Led consolidation program

Results

- **Operational expenditure reduced by more than \$1MM annually**
- **Further rationalisations recommended and program of work initiated to re-engineer server decommission procedure**
